DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "the waveguide" in 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fiedziuszko US Patent 4,453,146 in view of Miller US Patent 3,582,536.

Fiedziuszko disclose dual mode dielectric mode filter comprising four cavities delimited by to inductive irises 30, wherein the filter further comprises conductive probes (22) (which examiner considers to be the floating inserts). A dielectric sleeve supports the conductive probes. The conductive probes (22) are place in a notch (34) at the top of the iris (30). Fiedziuszko states that for ease of illustration, filter 10 is shown with its top sliced off, so that the upper endwalls 15 are not seen.

Thus, Fiedziuszko is shown to teach all the limitation of the claims with the exception of the floating inserts supported by a block of foam and foam having a relative dielectric constant close to 1.

Miller discloses a foam dielectric sleeve 14. (Column 2; lines 21-22) The foam dielectric is composed of polyethylene. (Column 2; line 43) Polyethylene foam has dielectric constant of approximately 1. (See Klopach et al US Patent 4,278,933 column 5; lines 66-68)

It would have been obvious to one of ordinary skill in the art to replace the general dielectric sleeve of Fiedziuszko with the foam dielectric sleeve as taught by

Miller, since it has been held to be within the level of ordinary skill in the art to select known materials on the basis of its suitability for the intended use of providing an isolating means.

Allowable Subject Matter

Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
